

MOVE EASY

! NEW

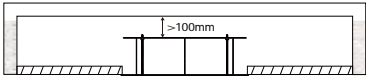

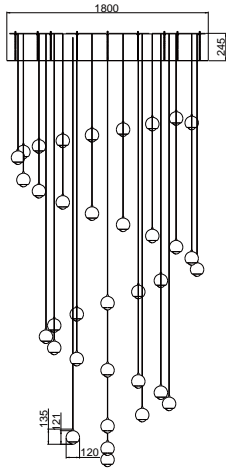

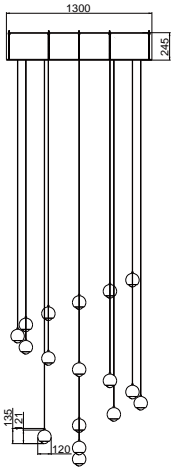

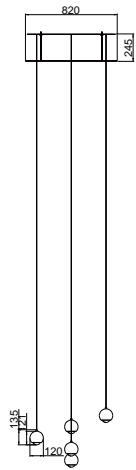

MOVE EASY is an intelligent decorative lighting system that redefines spatial light design through electromechanical integration and programmable motion.

At its core is a high-precision motorized lift combined with modular light units. Each fixture can be programmed with dynamic movements—wave-like flows, rainfall patterns, or elegant rotations—either individually or in synchronized groups.

This system offers both preset and fully customizable motion sequences, allowing designers to craft immersive lighting scenarios that evolve over time.

MOVE EASY is ideal for commercial interiors, art installations, and high-end residences—blending functionality with kinetic light artistry in one seamless design.

MOVE EASY

Unit: mm
The longest suspension wire is 10m
